

Tremco Incorporated certifies the physical performance of Paraseal® Parastick 'n' Dry™ (laminated bentonite applied to mesh with a pressure-sensitive adhesive on one side) in approved applications. Parastick 'n' Dry is used in conjunction with waterstops (i.e.—Parastop II), waterproofing membranes, Paraseal, and/or Paramastic to assist in waterproofing difficult areas. Typical blindside waterproofing applications calling for Parastick 'n' Dry include the detailing of soldier piles, wrapping concrete imbeds (i.e.—pipe penetrations), etc. It can also be used to form water isolations (i.e.—sandwich-slab applications).
